Integral functions with gap power series. (In English)

Proc. Edinb. Math. Soc., II. Ser. 10, 62-70 (1954). [**0013-0915**]

Let $f(z) = \sum_0^\infty a_n z^{\lambda_n}$, $\lambda_1 < \lambda_2 < \cdots$. One typical best possible result is: the upper limit as $r \to \infty$ of $m(r)/M(r)$ and $\mu(r)/M(r)$ (usual notations) is 1 provided $\sum_0^\infty \frac{1}{\lambda_{n+1}-\lambda_n} < \infty$.
