

## A PARAMETER CHOICE METHOD FOR TIKHONOV REGULARIZATION\*

LIMIN WU<sup>†</sup>

**Abstract.** A new parameter choice method for Tikhonov regularization of discrete ill-posed problems is presented. Some of the regularized solutions of a discrete ill-posed problem are less sensitive than others to the perturbations in the right-hand side vector. This method chooses one of the insensitive regularized solutions using a certain criterion. Numerical experiments show that the new method is competitive with the popular L-curve method. An analysis of the new method is given for a model problem, which explains how this method works.

**Key words.** discrete ill-posed problems, discrete Picard condition, Tikhonov regularization.

**AMS subject classifications.** 65F22.
