Subject: Material in General Mathematics article

Date: Mon, 22 Sep 2008 15:55:05 -0400

From: Kevin Clancey jkfc@ams.orgj

To: depmath@ulbsibiu.ro,

silviu.craciunas@ulbsibiu.ro

TO: Editors of General Mathematics

FROM: Kevin Clancey, Executive Editor, Math Reviews

Mathematical Reviews received the below input concerning a paper published in your journal:

Mathematical Reviews has not investigated this matter. However, it is our policy to pass such information along to the relevant publishers.

Please keep Mathematical Reviews informed of any developments relative to this matter.

MR2393060

Munteanu, Bogdan Gheorghe(R-BRASMI)

On the law of large numbers for free identically distributed random variables. (English summary)

Gen. Math. 15 (2007), no. 4, 55–68.

46L54(60F15)

The result of the paper is exactly the same as that in H. Bercovici and V. Pata [Ann. Probab. 24 (1996), no. 1, 453–465; MR1387645 (97h:46103)], which is not referenced by the author. The outline and techniques of the proof are the same as in Bercovici and Pata [op. cit.]. Even the wording of Theorem 2.1 in this paper and that of Theorem 1' in Bercovici-Pata coincide, up to small word changes.
